

Meet Your Stevens Scholar

THE ALUMNI CLASS OF 1957 SCHOLARSHIP

Student Name: Emily Sellitti

Graduation Date: May 2017

Major: Mathematical Science

Honors and awards I have received at Stevens, Community service and volunteer activities I am involved with:

I was awarded the Stevens Grant and the Presidential Scholarship due to the grades I received in high school and my need for financial support. I also received second team all-conference, two years in a row, playing for the Stevens Softball team, which was due to my performance on the field.

Things I do outside of class:

Most of my time at school is spent on my academics, which is me going to many reviews and working with others. Outside of these academic activities, I am currently a member of the Stevens Softball team. Our team runs quite a few clinics, voluntarily and for a fundraiser. We

run a Weehawken clinic during our fall season and I teach the children, that want to learn, how to play third base. As a team we also are a part of the ducklings program. We went to Hoboken elementary school and played games with the children and did physical activities with them. I love to be a part of these volunteer programs because I love to help people. These activities helped me to see how much helping people can give you such self fulfilment even though you are not the one receiving the action. The children are so happy to have so many people there volunteering and caring about them and I adore that.

After graduation I plan to:

After I graduate, I would like to go on and become an actuary. I enjoy the type of math that is involved with in the job. I was first turned on to this job by my neighbor. He works for a company in the city as an actuary. Since he has lived across the street from my all my life, he knew that I had a sizable interest in mathematics. I want to strive to work for an amazing company, hopefully in the city. I am going to take the first test required for this job in January 2016. Stevens has helped me with this choice because they have such an amazing math program. Although Stevens is mostly an Engineering school, its math program is able to prepare a mathematical major for the math they are going to see in their future career.

Thank you for your scholarship:

I would like to thank you so much for this opportunity to show you what I have to offer. This scholarship is very important to me and my education. I am the youngest of five children and it is very difficult for my parents to be able to send me to this absolutely extraordinary school. I am so grateful that I will be able to further my education in mathematics with the help of this scholarship. I will be able to take all of my classes and be able to set my path for my future career. Again, thank you so much for honoring me with the Alumni Class of 1957 scholarship.
